I wonder if anyone else has been gazing with interest at the article in the May AWA OTB re the Girard 2-tube rx. This rx was mfg. and sold in the late '30's. It really gets a lot of mileage out of only two tubes. It uses a 3A8 as RF amplifier, detector/AGC and 1st audio amp. A 117N7 provides provides beam power audio output amplifier and ac line power rectifier. Thats 5 functions with only two tubes. One neat trick is that the 117N7's plate current acts as the filament current for the 3A8 (2.8v 50 ma.). This along with a 150 ohm series resistor also provides grid bias for the 117N7. It operates directly from the line, so if you plan on building one, use an isolation xfmr!! I'm thinking about adding some regeneration to the TRF stage and trying it out on the 5-6 MHz SW broadcast band.

Hi Gang,

A bunch of us are going to Dayton. I will also be in the flea market with a number of pieces of Hammarlund, Drake, Collins, and National gear for sale. It includes Hammarlund Receivers and Transmitters, Johnson Transmitters and the like. The list is too long to go into here. But feel free to visit my spaces [1345-1347] to see what all has followed me down there. I am doing a major housecleaning and expect to have almost 100 pieces of gear there for adoption to a good home. I will not have the time between now and Wednesday morning, when I leave, to answer personal queries, so please accept my apologies in advance. Let me say this though,, everything is clean, works and has manuals. I'll be looking for some faces to put with names on Friday, though. Have fun and see you there!!
